

## HYGIENIC AIR HANDLING UNIT

### A new option to certify the hygienic aspect of Air Handling Units

Eurovent Certita Certification launches the **Hygienic option** for the Eurovent Certified Performance (ECP) AHU programme. This option will guarantee the hygienic aspect of an Air Handling Unit by checking the quality of the materials used, the components selected, as well as the level of maintenance of the casing and of the components.

This certification programme includes requirements related to hygienic standards on :

- Manufacturing.
- Shipment.
- Materials (compliance with European standards).
- Maintenance.
- Casing performance.
- Components arrangement and performances (filters, coils, heat recovery systems, fans, humidifiers, dehumidifiers and silencers).

Yearly audits will certify the capability of a manufacturer to produce hygienic units.

Once certified with the **Hygienic option**, an AHU will be declared suitable for different applications, easy to identify thanks to its classification :

- ☆ 1 star for Offices, commercial buildings, schools, hotels.
- ☆☆ 2 stars for Hospitals.
- ☆☆☆ 3 stars for Pharmaceutical, food processes, white rooms.

**How to participate:** To claim the hygienic option a manufacturer will first need to be a participant of the ECP AHU programme. **Documents are available and registration will open on the 1<sup>st</sup> of August 2016.**
